1. Kingsgate – Overview

Kingsgate is a payment processing service that primarily serves **merchants**, including those operating gaming or other online platforms. It provides payin and payout solutions for these platforms and generates revenue by charging service fees to merchants.

A distinctive part of Kingsgate is the use of **Members**, who provide their own payment details (e.g. UPI IDs, bank accounts) to facilitate merchant transactions through offline remittance. The platform also uses a **multi-level agent system** for recruiting merchants and members, with commission structures for Member Agents and Merchant Agents.

The system supports:

- **Payins** – End users paying for products or services on a merchant's website.
- **Payouts** – Merchants sending money to their end users (e.g. rewards, winnings).
- **Withdrawals** – Merchants and agents withdrawing balance or commissions to their bank accounts.
- **Top-ups** – Members fulfilling top-up orders to earn quota.
- **Settlement** – UPI vendors settling collected payins with the platform.

2. Business Context – Definitions

2.1 Channels

Channels are the available payment methods used to process orders in Kingsgate. They define how money moves for payins, payouts, top-ups, and other order types. The platform supports two main channel types: **Member Channels** and **3rd Party PG (Payment Gateway) Channels**.

2.2 Member Channels

Member Channels are payment methods provided by Kingsgate **Members**. Members supply their own payment details (e.g. UPI ID, bank account, e-wallet) so that end users or the platform can send or receive money. Member channels are used for **offline remittance** – the payer uses a third-party app (e.g. Google Pay, Paytm, net banking) to transfer funds to the member's details, then submits proof (e.g. transaction ID, receipt/screenshot) for confirmation. Member channels are used for payins, payouts, top-ups, and (where applicable) withdrawals.

2.3 3rd Party PG (Payment Gateway) Channels

3rd Party PG Channels are payment methods powered by external payment gateways such as **Razorpay, PhonePe, PayU, Cashfree, and UniqPay**. These channels typically provide online, API-driven flows (redirect, collect, etc.) and serve as a **backup or alternative** when Member Channels are unavailable or when the merchant prefers gateway-based payment.

2.4 Offline Remittance

Offline Remittance is the process where a user (e.g. end user or member) makes a payment using payment details provided by the platform (e.g. a Member's UPI ID or bank details) via a **third-party payment application** (e.g. Google Pay, Paytm, net banking apps). After completing the payment outside the Kingsgate UI, the user submits the **transaction ID** and optionally a **receipt or screenshot** for confirmation. Members are used in these flows; the platform may also use offline remittance for certain withdrawal or settlement flows handled by admins.

2.5 Gateways

Gateways are the technical integrations to third-party payment gateways (Razorpay, PhonePe, PayU, Cashfree, UniqPay, etc.). Each gateway is configured with credentials and channel settings (e.g. UPI, Net Banking, E-Wallet). Gateways power the 3rd Party PG Channels; the platform assigns a gateway to a payment order when the merchant or system chooses a non-member-channel flow.

3. Types of Users

Merchant	• Uses Kingsgate for payin and payout transactions on their website so their end users can make and receive payments. • Can use both Member Channels and 3rd Party PG Channels for processing payments. • Can submit payout orders for their end users via the dashboard; these are processed through Member Channels or 3rd Party PG APIs. • Dashboard includes a Balance: increases with payins, decreases with payouts and service fees. • Can withdraw balance from the platform (withdrawal orders). • Merchants are registered by an Admin.
Member	• Provides their own payment channels (UPI, net banking, e-wallet) for handling payins and payouts via offline remittance. • For payins: their channels are used so end users can pay through offline remittance. • For payouts: they facilitate payments to end users via offline remittance. • Earns commissions for processing payin, payout, and top-up orders. • Dashboard has a Quota: increases when they handle a payout, top-up, or earn commissions; decreases when they receive a payin. • Can register via the signup page. • A member can also act as a Member Agent for another member.
Member Agent	• Recruits members and other member agents to the platform. • Commissions: Earns commissions on payin, payout, and top-up orders involving members in their downline (members they or their sub-agents have recruited). Commission structure may be tiered by level (e.g. 1st level, 2nd level). • Can withdraw earned commissions from the platform. • Registered by Admin (except when a member signs up and also acts as member agent).

	• Can have multiple levels: 1st level = direct recruits; 2nd level = recruits of 1st level agents, and so on.
Merchant Agent	• Recruits merchants and other merchant agents to the platform. • Commissions: Earns commissions on payin and payout orders involving merchants in their downline. • Can withdraw earned commissions from the platform. • Registered by the Admin. • Multi-level: 1st level agents = those who join without a referring merchant agent; 2nd level = referred by 1st level, and so on.
Admin	• Responsible for system surveillance and verifications (e.g. KYC, merchant/member/agent approvals, withdrawal verification). • Registers merchants, merchant agents, and (where applicable) member agents. • Manages channels, gateways, system config, organisations, teams, and order oversight (payins, payouts, withdrawals, top-ups, settlements). • Has access to commissions and profits view, fund records, and user management (admins, agents, members, merchants, UPI vendors, end users).
UPI Vendor	• Provides UPI IDs (and related details) for UPI collect flows. Used when the platform routes payin orders to a dedicated UPI vendor channel instead of a generic member channel. • Receives payin orders against their UPI IDs; when end users pay, the vendor's account is credited. The platform tracks these and creates settlement orders to settle the collected amount with the vendor (e.g. via offline remittance or bank transfer). • Dashboard includes: Overview, Bulletin Board, Payin History, My UPI IDs, Settlement Orders, Fund Records, My Account.

Teams	Teams group users (e.g. agents, members) for hierarchy and reporting. They are used to organise agent/member structure and apply team-level settings or reports.
Organisations	Organisations represent top-level entities (e.g. partners or white-label clients). Config and reporting may be scoped by organisation for multi-tenant or white-label setups.

4. Types of Orders & Flow Diagrams

Flow steps and fee/commission logic below reflect the platform implementation. Each order type includes a fee flow description and an example breakdown for a **₹1,000** order (rates are illustrative; actual rates are configurable per merchant, member, agent, and system config).

4.1 Payin Order

Description: Placed by end users when purchasing products or services on a merchant's website. Money flows from end user to merchant (via the platform).

Processing: Member Channels (offline remittance) or 3rd Party PG Channels (gateway redirect/collect).

Step	Actor	Action
1	End User	Initiates payment on merchant site (e.g. checkout link).
2	Platform / Merchant	Creates payin order; assigns channel (Member or 3rd Party PG).

3a	Member Channel	User sees member's payment details → pays via external app → submits UTR/receipt.
3b	3rd Party PG	User redirected to gateway (Razorpay/PhonePe etc.) → completes payment online.
4	Platform	Confirms payment (callback or receipt verification); order status → Success.
5	Merchant	Balance credited; end user gets success on merchant site.

End User → Merchant Site → Platform (create order) → [Member Channel: Pay to Member → Submit UTR/Receipt] OR [3rd PG: Redirect to Gateway → Pay] → Platform (confirm) → Merchant Balance ↑

Fee and commission flow (from platform logic):

- **Member channel:** Merchant is charged a *payin service rate* (e.g. % of order). From that fee: (1) platform takes a *system profit %*; (2) the remainder is the pool for *member commission* and *member agent commission* (rates % of merchant fee). Any leftover in the pool goes to system profit. Merchant agents get a % of the system-profit slice (from merchant fee).
- **Gateway channel:** Same merchant fee; then *gateway fee* (e.g. % of order) is deducted from the post-system-profit pool; remaining is system profit.
- **UPI vendor channel:** Same merchant fee; *UPI vendor commission* (% of order) is deducted from the pool; remaining is system profit.

Party	Amount (₹1000 payin, member channel)	Note
Order amount	₹1,000	End user pays

Merchant service fee (e.g. 0.2%)	₹2.00	Deducted from credit to merchant
Merchant receives	₹998.00	Balance credited
System profit (e.g. 5% of fee)	₹0.10	From fee before member pool
Merchant agent (e.g. 30% of ₹0.10)	₹0.03	If applicable
Member commission (e.g. 2.5% of fee)	₹0.05	From member pool
Member agent (e.g. 20% of fee)	₹0.40	From member pool
System profit (remainder of pool)	₹1.45	Pool = fee – system slice; minus member/agent shares
Total system profit	₹1.55	₹0.10 + ₹1.45

4.2 Payout Order

Description: Request by merchant to transfer money to their end users (e.g. rewards, winnings).

Processing: Member Channels or 3rd Party PG Channels.

Step	Actor	Action
1	Merchant	Submits payout order via dashboard (amount, end user details).
2	Platform	Creates payout order; assigns channel (Member or 3rd Party PG).
3	Member / Gateway	Member pays end user offline, or gateway executes transfer via API.
4	Merchant	Balance debited; payout marked complete when confirmed.

Merchant (submit payout) → Platform (create order, assign channel) → Member/Gateway (pay end user) → Platform (confirm) → Merchant Balance ↓

Fee and commission flow:

- Merchant is charged a *payout service rate* (e.g. % of order). From that fee: (1) platform takes a *system profit* %; (2) the remainder is the pool for *member commission* and *member agent commission*. Merchant agents get a % of the system-profit slice. Any leftover in the member pool goes to system profit.
- If payout is via gateway, a *gateway fee* may apply; it is deducted from the pool before final system profit.

Party	Amount (₹1000 payout, member channel)	Note
-------	---------------------------------------	------

Payout amount	₹1,000	To end user
Merchant service fee (e.g. 0.2%)	₹2.00	Deducted with payout
Merchant balance debited	₹1,002.00	Amount + fee
System profit (e.g. 5% of fee)	₹0.10	From fee
Merchant agent (e.g. 30% of ₹0.10)	₹0.03	If applicable
Member commission (e.g. 1.5% of fee)	₹0.03	From member pool
Member agent (e.g. 20% of fee)	₹0.40	From member pool
System profit (remainder of pool)	₹1.44	Pool minus member/agent shares
Total system profit	₹1.54	₹0.10 + ₹1.44

4.3 Withdrawal Order

Description: Submitted by merchants or agents to withdraw their balance or commissions from the platform to their bank accounts.

Processing: Handled by admins via offline remittance or 3rd Party PG channels.

Step	Actor	Action
1	Merchant / Agent	Submits withdrawal request (amount, bank details).
2	Platform	Creates withdrawal order; status Pending.
3	Admin	Verifies and processes (offline transfer or PG).
4	Admin	Marks withdrawal complete; user balance/commission debited.

Merchant/Agent (request withdrawal) → Platform (pending) → Admin (verify & pay via offline/PG) → Platform (complete) → User balance/commission ↓

Fee and commission flow:

- User (merchant or agent) is charged a *withdrawal service rate* (e.g. % of withdrawal amount). User balance is debited by (amount + service fee).
- If withdrawal is processed via a *gateway*, a gateway upstream fee (% of amount) is applied; platform records it. System profit from withdrawal = service fee – gateway fee (can be negative if gateway fee exceeds service fee).

Party	Amount (₹1000 withdrawal)	Note
Withdrawal amount	₹1,000	User receives

Withdrawal service fee (e.g. 0.5%)	₹5.00	Deducted from balance
User balance debited	₹1,005.00	Amount + fee
System profit (admin processing)	₹5.00	If processed offline
If via gateway (e.g. 2% upstream fee)	₹20.00	Gateway fee; net system = ₹5 – ₹20 = –₹15

4.4 Top-up Order

Description: Initiated by the platform. Members fulfill these via offline remittance to the platform's bank accounts to earn quota.

Processing: Exclusively through Member Channels.

Step	Actor	Action
1	Platform / System	Creates top-up order; assigns to member.
2	Member	Sees top-up details; pays platform's account via offline remittance.
3	Member	Submits UTR/receipt for confirmation.

4	Platform	Confirms; member's Quota increases.
---	----------	-------------------------------------

Platform (create top-up) → Member (see details → pay platform offline → submit UTR/receipt) → Platform (confirm) → Member Quota ↑

Fee and commission flow:

- A *top-up service rate* (e.g. % of order amount) defines the commission pool. From this pool, the *direct member* gets a commission % (team or system default), and *member agents* get their % (of the pool). Member's quota increases by (order amount + member's commission).

Party	Amount (₹1000 top-up)	Note
Top-up amount	₹1,000	Member pays to platform
Commission pool (e.g. 10%)	₹100.00	Base for member/agent commissions
Member commission (e.g. 3% of pool)	₹3.00	Added to member quota
Member agent (e.g. 20% of pool)	₹20.00	If applicable
Member quota change	+₹1,003	Order amount + member commission

4.5 Settlement Order

Description: Used to settle funds collected by UPI vendors (from payins) with the platform. The platform pays the UPI vendor (e.g. via offline remittance or bank transfer).

Processing: Typically admin-driven; offline remittance or bank transfer.

Step	Actor	Action
1	UPI Vendor	Has collected payins against their UPI IDs; settlement is due.
2	Platform / Admin	Creates settlement order (amount, vendor).
3	Admin	Processes payment to vendor (offline or bank).
4	Platform	Settlement marked complete; vendor balance/records updated.

UPI Vendor (collected payins) → Platform/Admin (create settlement) → Admin (pay vendor offline/bank) → Platform (complete) → Vendor balance/records updated

Fee and commission flow:

- Settlement does not create new commission splits. The UPI vendor's *settlement amount* is the sum of payins already collected against their UPI IDs (after platform deducted UPI vendor commission at payin time). A settlement order pays that amount (or part of it) to the vendor; on approval, the UPI's settlement balance is debited and the vendor is paid (e.g. offline or bank).

Party	Amount (₹1000 settlement)	Note
Settlement amount	₹1,000	Already accrued from payins (net of UPI vendor commission at payin)

Paid to UPI vendor	₹1,000	On admin approval
UPI settlement balance	-₹1,000	Debited on approval

5. Modules and Tab Breakdown of User Dashboards

Below is the module and tab breakdown for each user role in the Kingsgate dashboard.

5.1 Admin Dashboard

Module / Tab	Description / Sub-items
Overview	Dashboard summary (orders, balances, key metrics).
Order Management	Payin Orders, Payout Orders, Withdrawal Orders, Top-up Orders, Settlement Orders.
Merchant Management	CRUD, verification, integration status.
Member Management	CRUD, quota, commission settings.
Admin Management	Admin users and Sub Admin management.

Agent Management	Merchant agents and Member agents.
UPI Vendor Management	UPI vendors, UPI IDs, settlement.
End Users	View/manage end users (e.g. alerts, list).
Fund Record Management	Fund in/out records.
Channels & Gateways	Channels (config), Gateways (Razorpay, PhonePe, etc.).
Team Management	Teams and membership.
Organisation Management	Organisations and scoping.
System Config	Global/system-level settings.
Commissions and Profits	Commission and profit reports.
My Account	Admin profile and settings.

5.2 Merchant Dashboard

Module / Tab	Description
Overview	Summary of balance, payins, payouts.
My Payin Orders	List and details of payin orders.
My Payout Orders	List, create, and track payout orders (All Payouts, Pending, Users).
Sub Accounts	Merchant sub-accounts and permissions.
My Withdrawals	Withdrawal requests and status.
Integration	Integration steps (API keys, checkout URL, etc.).
Fund Records	Fund record history.
My Account	Profile, withdrawal password, settings.

5.3 Member Dashboard

Module / Tab	Description
Overview	Quota, orders, commissions summary.
Bulletin Board	Announcements and pending orders/top-ups.
My Payin Orders	Payin orders assigned to member.
My Payout Orders	Payout orders to fulfill.
My Top-ups	Top-up orders to fulfill.
Referral Codes	Create and manage referral codes (member agent).
My Commissions	Commission earned (payin/payout/top-up).
Fund Record Management	Fund in/out records.
My Team	Downline members / referral list.
My Account	Profile and payment details.

5.4 Merchant Agent Dashboard

Module / Tab	Description
Overview	Summary of commissions, merchants, orders.
My Withdrawals	Withdrawal requests for commissions.
My Commissions	Commission from recruited merchants' payins/payouts.
Fund Record Management	Fund records.
My Organisation	Organisation and downline view.
My Account	Profile and settings.

5.5 UPI Vendor Dashboard

Module / Tab	Description
Overview	Summary of payins, settlements, balance.
Bulletin Board	Pending orders, pending settlement orders.

Payin History	Payin orders against vendor's UPI IDs.
My UPI IDs	Register and manage UPI IDs.
Settlement Orders	Create/view settlement orders.
Fund Records	Fund record history.
My Account	Profile and settings.

6. Additional Business Context & Requirements

6.1 End User

End users are the customers of merchants. They do not log into Kingsgate; they interact only with the merchant's website and the payment page (checkout). They pay via Member Channels (offline remittance) or 3rd Party PG (redirect/collect).

6.2 Merchant Sub Accounts

Sub accounts are employees of a merchant. They have the same privileges as the main merchant account except for sensitive actions (e.g. withdrawal requests), which the main merchant account can allow or deny.

6.3 Sub Admin

Sub admins have the same privileges as the main admin except for sensitive actions (e.g. verifications), which the main admin can allow or deny.

6.4 Referral & Multi-level Structure

Member Agents and Merchant Agents have multi-level downlines. Commission may be configured per level (e.g. 1st level vs 2nd level). Referral codes are used to link new members/merchants/agents to the referring agent.

6.5 Payment Page (Customer-Facing)

The customer-facing payment page provides: checkout by integration ID, payment method selection (UPI, Net Banking, E-Wallet), redirect to gateways, member-channel instructions (UPI/Net Banking/E-Wallet), UPI vendor gateway flow, and payment status polling. It does not require login; it is used only for completing a payment.

6.6 Notifications & Alerts

Admins can manage alerts and notifications for end users. Members and UPI vendors see bulletins (e.g. pending orders, top-ups, settlement tasks).

6.7 Security & Verification

Withdrawal and sensitive actions may require admin verification. Merchants may have a withdrawal password. KYC or other verification flows can be enforced per role.
